

- Listview „LV\_CB\_Interessen“ ( 1 ) and ( 2 )
- On the screenshot ( 1 ) the Height of the ListView is set explicit to 180:  
`LV_CB_Interessen.HeightRequest = 180;`
  - A (bad!) workaround would be to set the HeightRequest depending on platform, device and orientation (as the text ( 1 ) e.g. only takes one line, if showed on a tablet in landscape-orientation and a HeightRequest of 180 then will be much too much ☺)
- On the screenshot ( 2 ) the Height of the ListView is **not** set explicit (should be calculated automatically)
  - As you can see on the Screenshot ( 2 ) there is a lot of unneeded space added automatically.
  - Note: if the page (ScrollView) is scrolled down, the further controls are showed (there is - maybe - half of the red arrow on the Screenshot more space added).
