

PINK STAIN INFORMATION

Q. What is pink stain?

A. Pink stain is typically a small quarter sized spots or splotches that appear near seams on upholstery or randomly on outdoor furniture.

Q. What causes pink stain?

A. Pink stain is caused by dyes produced by microorganisms that slip into the seats through the seams during rain, or water puddles. The microorganisms' waste product leaves the pink stains. The stains are on the inside of the cushion showing through, they can not be removed with any cleaners.

Q. How can pink stain be prevented?

A. Keep the upholstery clean and as dry as possible. Frequent cleaning with mild dish detergent such as Ivory soap is imperative in removing organisms from the surface. Keep the boat covered when not in use, this prevents water and organisms from coming contact with the upholstery.
