How about a screen shot? I'm not certain I really or fully understand your problem and it's a first for me. I haven't heard anyone else suggesting there's an issue with the font or spacing of text, could it be your browser settings? Vanilla hosts and supports the forum platform for nuCamp and they tweak things from their end as needed.

FIGURE Two:

Do we users or you super users have any control over how Posts & Reply line / paragraph spacing is handled.

HERE, ideally should be one linefeed, not 2+

When a post/reply is "viewed" using the "preview post" button everything looks fine.

Then the "**Post**" button produces something different . . . with extra line feeds or 1.5 line instead of 1.0 line feeds.

HERE, ideally should be one linefeed, not 2+

I've attempted to edit out the <div> </div> formatting thinking that is adding the empty space . . . but the space returns with the "**Post**" button.

Is driving me crazy.

HERE, ideally should be one linefeed, not 2+, unless you wanted two

Thanks,

HERE, ideally should be one linefeed, not 2+

Mike
