

PIPE & COUPLING

Cast Iron Soil Pipe & Fittings Couplings & Gaskets

11910 Country Road 492 • Tyler, Texas 75706
(800) 527-8478 • TylerPipe.com

GUIDE TO ORDERING:

1. To avoid errors, specify part numbers.
2. When selecting regular fittings, size of openings appear in this order:
 - a. Main
 - b. Branch or branches
3. When selecting reducing/increasing fittings, size appears as illustrated:

Hub & Spigot:

1. Spigot of Main
2. Hub of Main
3. Branch (Branches) or Side Openings
4. Length

No Hub:

1. Bottom Outlet
2. Top Inlet
3. Branch (Branches) or Side Openings
4. Length

RH (Right Hand) Fittings Illustrated

4. When selecting long fittings, long bends are measured from the spigot (outlet) to the centerline of the hub (inlet); long branch fittings are measured from the spigot (outlet) to the base of the hub (inlet).
5. To specify right or left side openings, position fittings as follows and read left or right...
 - a. Bends, face open hub (inlet) with spigot (outlet) down.
 - b. Branch fittings, face open hub (inlet) of main with branch down.
6. All pipe and fittings are furnished coated.

STANDARDS & SPECIFICATIONS:

Piping to be installed for the various services shall be as specified or in accordance with local plumbing codes:

CURRENT STANDARDS

☛ NO-HUB® Cast Iron Soil Pipe and Fittings:

- CISPI 301..... (Cast Iron Soil Pipe Institute)
- ASTM A 888(American Society for Testing and Materials)

☛ NO-HUB® Couplings:

- CISPI 310.....(Cast Iron Soil Pipe Institute)
- ASTM C 1277(American Society for Testing and Materials)
- ASTM C 1540 (American Society for Testing and Materials)

☛ SV Hub and Spigot Cast Iron Soil Pipe and Fittings:

- ASTM A 74.....(American Society for Testing and Materials)

☛ Hub and Spigot Gaskets:

- ASTM C 564.....(American Society for Testing and Materials)

The **by-pass fitting** permits in-line piping to reduce width of the chase, and individual venting of the lavatories.

Tub wye fittings accept waste from two tubs and provide a common vent. They save space, materials and the labor to install duplicate systems.

RufWall Savings with Back Outlet Fixtures: (Compared with Conventional Piping)

- Fewer floor penetrations
- Eliminates cost of dropped ceilings to conceal pipe
- No scaffolding needed
- One-man installation
- Waist-high venting
- Water closet easier to install...faster

NOTE:

Rufwall fittings are sold and shipped as normal cataloged soil products. This publication contains the information needed to place orders with your customer service representative.

SERVICE GASKETS, GASKET LUBRICANTS

LUBRI/FAST® LUBRICANT

Part No.	Size
005148	Quart

LUBRI/FAST® LUBRICANT

- The unique **LUBRI/FAST®** formula makes joining TY-SEAL gaskets easier and faster because it's so slick! Applied as a liquid, **LUBRI/FAST®** actually reduces joining forces required; then it literally "fastens" the joint.
- **LUBRI/FAST®** is applied with an ordinary paint brush. It may be used for joining all pipe and fittings, and is **required** for joining all larger diameters 5" through 15".

TY-SEAL® LUBRICANT

Part No.	Size
005117	Quart

TY-SEAL® LUBRICANT

- An excellent water-soluble joint compound, TY-SEAL LUBRICANT has demonstrated its efficiency in millions of joints.
- Quick and easy to use under all conditions... even under water!

To Assemble Fittings:

Place yoke behind hub, adjust bar to length of fitting and pull handle to join in soil pipe.

Soil Pipe Puller

Part No.	Size
005155	2-3-4
393948	5-6-8

CLEANOUT BODIES:

Standard Ferrule 2-11 is made according to Soil Pipe Standards. It is approved for use in all areas where codes do not require special local designs. Tapping sizes 2½, 3½, 4, 5 and 6 will admit conventional full opening test plugs.

1. Question: From what elastomers are the sealing sleeves for the Standard NO-HUB and HUSKY couplings made, and what is the highest water temperature that it will handle?

Answer: The gasket elastomer used in the manufacture of the NO-HUB and HUSKY sealing sleeves is Neoprene in accordance with ASTM C 564. The properties of Neoprene make it suitable for moderate chemicals and acids, oil fats, greases, many solvents and air with hydrocarbons. Neoprene will not support combustion. The maximum temperature that Neoprene will accommodate with continuous service is 203°F. with a maximum intermittent temperature of 212°F. Neoprene is the only gasket elastomer offered with these couplings.

2. Question: From what elastomer are the standard TY-SEAL and EZ-TITE gaskets made and what is the highest water temperature they will handle? Are these gaskets available in other elastomers?

Answer: The elastomer used in the manufacture of the TY-SEAL and EZ-TITE gaskets is Neoprene in accordance with ASTM C 564. The properties of Neoprene make it suitable for moderate chemicals and acids, oil fats, greases, many solvents and air with hydrocarbons. Neoprene will not support combustion. The maximum temperature that Neoprene will accommodate with continuous service is 203°F with a maximum intermittent temperature of 212°F. Neoprene is the only elastomer that Tyler Pipe offers with EZ-TITE gaskets. Tyler does offer the TYSEAL gaskets in Buna-N (also known as Nitrile or NBR) which afford a 239° continuous service temperature maximum. Buna-N gaskets are suitable for gasoline, diesel, petroleum products, hydrocarbons, mineral water and vegetable oils.

FREQUENTLY ASKED QUESTIONS SOIL DIVISION

3. Question: What is the pressure rating for the NO-HUB and HUSKY couplings?

Answer: Couplings for Drain, Waste and Vent are not pressure rated. They are designed to hold 4.3 psi (10 ft. of head) for hydrostatic testing purposes as stated in CISPI 310. The NO-HUB, HUSKY 2000 and HUSKY 4000 couplings meet the performance criteria of FM 1680, all classes.

4. Question: What is the pressure rating for the TY-SEAL and EZ-TITE compression gaskets for hub and spigot joints?

Answer: Drain, Waste and Vent compression gaskets for Service Weight pipe and fittings (TY-SEAL and EZ-TITE) are not pressure rated. They are designed to hold 4.3 psi (10 ft. of head) for hydrostatic testing purposes as recommended in the Cast Iron Soil Pipe Institute Handbook.

5. Question: Are the couplings sold by Tyler Pipe for hubless applications UL or FM approved?

Answer: No plumbing code requires UL certification for couplings. All couplings manufactured by Tyler Pipe meet the performance requirements of FM 1680, all classes, however they are not listed by Factory Mutual.

6. Question: If there is no pressure rating for TY-SEAL/ EZ-TITE Gaskets or NO-HUB couplings, what will keep the joints from separating if a line backs up?

Answer: It is necessary to understand the difference between pressure and thrust. Thrust is equal to the hydrostatic pressure (4.3 psi @ 10 ft. of head) multiplied by the area. As a cylinder is filled with water, thrust forces are exerted on all changes of direction, bends, branches, fittings with reductions and ends of runs,

These locations must be restrained in order to prevent joint movement or separation. On a vertical run, the weight of the pipe helps to stabilize the joints on the run, but proper restraints are still necessary.

7. Question: Are the couplings sold by Tyler Pipe for hubless applications fire protection rated?

Answer: No. Since the Neoprene sleeve is completely protected by a non-flammable stainless steel shield, fire rating is not required.

8. Question: Is adhesive lubricant required to join SV pipe and fittings with TY-SEAL or EZ-TITE gaskets?

Answer: Tyler Pipe requires the use of adhesive lubricants for sizes 5" diameter and larger. On sizes 2" through 4", regular non-adhesive lubricant may be used.

9. Question: Does Tyler sell an adhesive lubricant?

Answer: Yes. Tyler offers LUBRIFAST® LUBRICANT which affords easy installation application while literally "fastening" the joint.

10. Question: Can I use an adhesive lubricant with NO-HUB couplings?

Answer: Tyler Pipe Company does not require or encourage the application of any type of lubricant with NO-HUB couplings. Although lubricants will have no adverse effect on cast iron pipe and fittings or the Neoprene sleeve of the coupling, some codes will not allow any lubricant to be applied to NO-HUB couplings. Before using any lubricant with NO-HUB or any other hubless coupling connector, check the applicable codes for restrictions.

FREQUENTLY ASKED QUESTIONS SOIL DIVISION

11. Question: What is the maximum deflection of an SV or NO-HUB joint?

Answer: 5° per joint is the maximum allowable deflection for SV and NO-HUB connections.

12. Question: What coating does Tyler apply to its pipe and fittings?

Answer: Tyler Pipe applies a smooth even layer of bituminous petroleum asphalt coating through a dipping process for each piece of SV and NH pipe and all fittings. This coating affords a measure of corrosion protection as well adding cosmetic value.

13. Question: What is Tyler's recommended procedure for hydrostatic testing of SV and NH pipe?

Answer: Ten feet of head for 15 minutes, properly restrained, as referenced in the Cast Iron Soil Pipe Institute Handbook.

14. Question: Can Tyler Pipe's hubless pipe, fittings and NO-HUB Couplings be used below grade?

Answer: Yes! None of the model codes place any restriction(s) on the use of hubless pipe, fittings or couplings below grade. However, it is advised to first check with the local jurisdictional code before installation to ensure that no local restrictions have been placed on hubless below grade applications.

PIPE O.D.'S

Because many items listed are not made by Tyler Pipe, we cannot be certain that all data is current or accurate. Please check with the product manufacturer for their most recent information.

Bracing:

To prevent movement, horizontal pipe and fittings 5" and larger should be suitably braced by the use of blocks, rodding or other suitable methods at every branch or change of direction.

Test:

For best results, test one floor (ten feet) at a time. The system should be properly restrained; all bends, changes of direction and ends of runs should be restrained.

Gasket Material:

Ez-Tite gaskets are made of Neoprene as the sole elastomer. The physical characteristics of the Neoprene ensure that the gasket will not decay or deteriorate from contact with effluents in the pipe or chemicals in the soil or air around the pipe.

Description:

Ez-Tite is a one-piece compression gasket. It is used for joining hub and spigot cast iron soil pipe and fittings made according to ASTM A 74.

Gasket Specification:

Ez-Tite gaskets conform strictly to ASTM Standard C 564, latest issue.

Joint Characteristics:

Gasket joints will not leak even if deflected as much as 5 degrees, or when subjected to vibration, seismic tremors, expansion, contraction, external or internal test pressure.

How to Specify:

All 2-inch through 6-inch hub and spigot cast iron soil pipe and fittings shall conform to ASTM A 74; joints shall be made either by caulked lead and oakum or by compression gaskets which conform to ASTM C 564.

NOTE: An adhesive lubricant is required for TY-SEAL and EZTITE gasket sizes 5-inch and larger diameters. Tyler offers LUBRI/FAST® LUBRICANT for this application.

Physical Properties:

Property		Performance Requirement		ASTM Test Method
Hardness (nominal durometer ± 5) as specified by the pipe manufacturer	50	60	70	D2240
Elongation, min, percent	350	300	250	D412
Tensile strength, min, psi (MPa)	1500	1500 (10)	1500 (10)	D412 (10)
Tear Resistance, min, lbf/in. (N/cm)	150 (268)	150 (268)	150 (268)	D624
Compression set, max, percent	25	25	25	D395
Heat aging, 96 h at 158° $\pm$ 2° F (70° $\pm$ 1° C)				D573
Hardness, increase, max, durometer pts	10	10	10	
Loss in tensile strength, max, percent	15	15	15	
Loss in elongation, max, percent	20	20	20	
Water absorption: Weight increase, max, percent	20	20	20	D471
Ozone resistance: no cracks	no cracks	no cracks		D1149
Oil Immersion: Volume increase, max, percent	80	80	80	D471

Description:

TY-SEAL is a one-piece compression gasket. It is used for joining hub and spigot cast iron soil pipe and fittings made according to ASTM A 74.

Gasket Material:

TY-SEAL gaskets are made of Neoprene as the sole elastomer. The physical characteristics of the Neoprene ensure that the gasket will not decay or deteriorate from contact with effluents in the pipe or chemicals in the soil or air around the pipe.

Gasket Specification:

TY-SEAL gaskets conform strictly to ASTM Standard C 564, latest issue. The TYSEAL mill specification meets or exceeds all requirements.

Bracing:

To prevent movement, horizontal pipe and fittings 5" and larger should be suitably braced by the use of blocks, rodding or other suitable methods at every branch or change of direction.

Pipe Specification:

TYLER hub and spigot cast iron soil pipe and fittings comply with the latest issue of ASTM A 74, ANSI A 112.5.1 and Federal Specification WW-P-401 E.

1. Clean hub and spigot to be joined.

3. Align hub and spigot.

2. Insert gasket in the hub, lubricate inside the gasket

4. Pull or push spigot through the gasket until firmly sealed.

Physical Properties of Ty-Seal Gaskets:

Physical Property	Test Method	Performance Requirements
Hardness, durometer A	ASTM D 2240	70 ± 5 points
Tensile Strength	ASTM D 412	1500 psi. minimum
Elongation of break	ASTM D 412	250% minimum
Tear Resistance	ASTM D 624 (Die C)	150 lbs. per lin. inch minimum
Resistance to heat aging	ASTM D 573	
Change in original properties after 96 hrs. at 158° F.		
Hardness		± 10 points maximum
Elongation		-20% maximum
Tensile strength		-15% maximum
Resistance to oil aging	ASTM D 471	
Change in volume after 70 hrs. immersion in ASTM Oil No. 3 at 212° F.		80% maximum
Resistance to ozone	ASTM D 1149	
Condition after exposure to 150 pphm ozone in air for 100 hrs at 140° F. (40° C.) (sample under 20% strain)		No cracks
Resistance to permanent set	ASTM D 395	25% maximum
Compression set after 22 hrs. at 158° F.	(Method B)	
Compression set after 22 hrs. at 14° F.	ASTM D 1229	60% maximum

Joint Characteristics:

TY-SEAL gasket joints will not leak even if deflected as much as 5 degrees, or when subjected to vibration, seismic tremors, expansion, contraction, external or internal test pressure.

Quality Control:

Company laboratory tests insure that finished gaskets conform to specification.

Availability of Products:

Cast iron soil pipe and TY-SEAL gaskets are sold through recognized plumbing distribution channels.

Plumbing Codes:

National plumbing codes and government agencies now provide for gasket joints.

Documents:

Certificates and reports validating all statements contained herein will be supplied on written request.

HOW TO SPECIFY:

All 2-inch through 15-inch hub and spigot cast iron soil pipe and fittings shall conform to ASTM A 74; joints shall be made either by caulked lead and oakum or by compression gaskets such as TY-SEAL which conform to ASTM C 564.

Description:

Tyler Pipe standard no-hub couplings are manufactured in accordance with CISPI 310 and are designed to join cast-iron pipe and fittings in drain, waste and vent applications. Each coupling includes two components: a molded, one-piece neoprene sealing sleeve and a 300 series AISI stainless steel shield/ clamp assembly featuring compression bands over our trademark diamond-corrugation shield pattern. No-hub couplings are available in sizes from 1½" to 15" in diameter.

Neoprene Sealing Sleeve:

Tyler Pipe standard-coupling sealing sleeves conform to ASTM standard C 564 and are made of high-purity neoprene. This material delivers superior resistance to decay and deterioration from contact with effluents in the pipe, chemicals in the soil, or air around the pipe - including oil and other petroleum products. Also, neoprene can withstand high liquid temperatures up to 212°, is fire resistant and does not support flame. Each sleeve features a double row of raised, sealing rings positioned under each compression band to provide multiple, sealing surfaces on either side of the connection. This ensures a permanent, leak-proof joint that can reliably accommodate minor, pipe-mat-ing diameter variations.

Shield and Clamp Assembly:

Tyler® couplings incorporate a shield and clamp assembly fabricated from 300 series stainless steel for maximum corrosion resistance. Clamping bands are mounted and attached to the shield by a fixed and floating eyelet system that allows for variable adjustment of each clamp during tightening. Our shield's patented diamond-pattern corrugation design locks the sealing sleeve under the shield and prevents slippage or extrusion - even under elevated internal pressure or external stress. The clamp bands on 1½"- 10" diameter couplings require 60 in-lbs of torque. 12"-15" diameter couplings require 80 in-lbs of torque.

Material Specification:

Bands	300 Series AISI Stainless Steel
Screw Housing	300 Series AISI Stainless Steel ⅜" hex head slant shoulder
Shield	300 Series AISI Stainless Steel
Sealing Sleeve	Neoprene elastomer compound conforms to ASTM C 564

Bracing:

Horizontal pipe and fittings 5" and larger should be suitably braced using blocks, rodding or other methods at each branch or change in direction.

Suggested Specification:

No-hub cast-iron soil pipe and fittings shall be joined with Tyler Pipe NSFcertified couplings that conform to the CISPI 310 / ASTM C1277 standard. Couplings will be installed according to the installation instructions of the manufacturer. All pipe and fittings on which couplings are installed shall bear the registered trademark $\times$ signifying they comply with the Cast Iron Soil Pipe Institute Standard 301.

Joint Characteristics:

A superior gasket joint is produced with a Tyler Pipe standard no-hub coupling. It is designed not to leak, even when subjected to vibration, seismic tremors, expansion, contraction, deflection by as much as 5 degrees, or external and internal test pressure.

Quality Control and Documentation:

Tyler Pipe's internal quality control processes include daily performance testing to verify conformance of all components to established standards. In addition, NSF periodically tests, inspects and audits Tyler Pipe's manufacturing facility. Certificates and reports validating all claims contained in this Submittal will be supplied upon written request.

PHYSICAL PROPERTIES

Property	Value	ASTM Test Method
Tensile Strength	1500 psi minimum	D 412
Elongation of Break	250% minimum	D 412
Hardness, Durometer (A)	70 $\pm$ 5 at 76° $\pm$ 5° F	D 2240
Tear Resistance	150 lbs. per inch, min	D 624 (Die C)
Water Absorption (Wt. Change, 20% maximum 7 days at 158° F)	20% maximum	D 471
Resistance to Heat Aging (Change in original properties after 96 hrs. at 158° F)		D 573
Hardness	10 points, maximum	
Elongation	20% maximum	
Tensile Strength	15% maximum	
Resistance to Oil Aging (Change in volume after 70 hrs. immersion in ASTM oil IMR903 at 212° F)	80% maximum	D 471
Resistance to Ozone (Condition after exposure to 1.0 pphm ozone in air for 100° F - Loop-mounted sample approximately or 20% elongation)	No Cracks at 2x Magnification	D 1149
Resistance to Permanent Set (Compression set after 22 hrs. at 158° F)	25% maximum	D 395 (Method B)

Specifications:

All 1½ inch diameter and larger cast iron soil pipe and fittings for above and below grade soil, waste, vent lines, rain water conductors and storm drainage lines shall bear the registered insignia × or × NO HUB® indicating that these items used in the sanitary system comply with the Cast Iron Soil Pipe Institute Standards 301 or ASTM A888.

Standards:

CISPI 301: Hubless Cast Iron Soil Pipe & Fittings

ASTM A 888: Hubless Cast Iron Soil Pipe & Fittings

ASTM C 564: Rubber Gaskets for Cast Iron Soil Pipe & Fittings
