Is there a way to scan for ATR using Stockcharts scan workbench?

Trying again:)

1 Along with other parameters I'm looking for volatility in stocks to trade. Is there a way to use the stockcharts workbench to include an Average True Range parameter? This could be either a \$ or %.

scan-workbench atr

1 Let me apologize again for closing your question prematurely. Since you are asking for this question a second time be more specific into what you are looking for? Otherwise the answer is, yes it is possible to do it, more so with a dollar value than with the percentage.

 ekwong (Feb 19)

No need to apologize. I will try to make the question clearer. First I will try LorRoy's suggestion. Jim

Here's some suggestions if you have access to Advanced scan workbench:

- 4** and [ATR(10) > SMA (10,ATR(10))]
- and [ATR(10) > SMA (10,ATR(10)) * 1.10]
- and [ATR(10) > SMA (10,ATR(10)) *.90]
- and [ATR(10) >1 day ago MAX (10,ATR(10))]

Hope it helps.

Thanks LouRoy - I'll give it a try. Jim

@jusplainjim: Don't try all of them at once. LouRoy is throwing a bunch of options you could add to your scan, w knowing specifically what you are looking for.

If you have access to Advanced scan workbench, look in the "Scan builder" section of the page, under the Indicators drop down. They are grouped by similar types of indicators. ATR is pretty far down, in the "RSI" g

On the Standard workbench, it's under "Additional Technical Expressions", in the Indicators, etc. drop down 3/4s of the way down.

I just saw AT already answered this on the first thread. He gets the points if you like his answer.
