1 cfalco, could you supply a little more detail here? Do you want scan a specific sector, for ETFS in that sector, with a specific RSI value?

 AgnosticTrader (Aug 23 at 13:00)

No, I would like to scan all sectors for ETF's with a RSI cross over. I would also like to scan the individual sectors that I choose.

That helps a little but still not 100% sure what you mean by RSI crossover.

You can scan the ETF group and Sector groups with the Advanced Scan.

If you want scan all ETFs for **RSI crossing over a certain value**, you can do something like this.

[group is ETF] and [yesterday's RSI (14) < 30.0] and [RSI (14) > 30.0]

The same scan can be used for a scanning stocks in a sector - it would look like this:

[group is TransportationSector] and [yesterday's RSI (14) < 30.0] and [RSI (14)

Cut an paste either of those scans right into the engine if you want to try them.

Here's a screen shot of where you select the sectors. Hope this is of some use. If you are looking for some other kind of RSI crossover let us know, maybe we can help.

User-Defined Scans: Advanced

1 Use the following form to create your scan. Use the dropdown menus in the "Scan Builder" area to help you insert scan clauses.

2 Individual clauses should be enclosed with square brackets and joined together with "and" or "or". Click [here](#) to see some examples.

3 Press "Check Syntax" there are no errors. V Expression contains "Run Scan".

Starting trading days before the show me the symbols that meet the following criteria.

or choose from [A](#)

Scan Expression:

[group is TransportationSector] and [yesterday's RSI (14) < 30.0] and [RSI (14) > 30.0]

Your scan syntax is correct. Click "Run Scan" to view the results.

Scan Builder

Use these dropdown menus to help you insert individual clauses into your scan expression, above. The clauses will be inserted with default values that you can adjust. Click [here](#) to see some examples.
