A sample application is a fully functional demonstration that can be used as-is or extended to suit your own requirements. Please let us know what you think of them, ask questions about their use, request and suggest new sample applications, and contribute any additions that you make yourself to improve on them.

Below you will find links to all of the new sample applications produced and updated specifically for xCP 2.1 & 2.2

WorkSpace

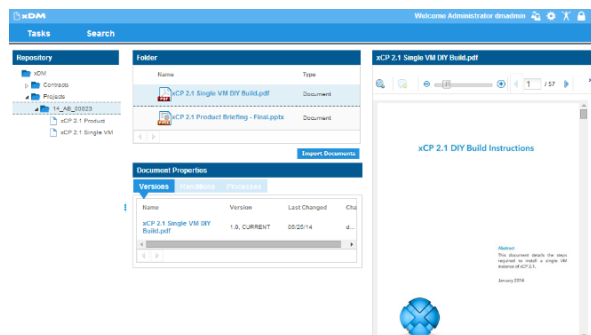

Employee on boarding application that highlights the power and flexibility of xCP features such as UI Events and Page Fragments to provide a modern, intuitive user interface that can be personalised by the user.

xCelerated Case Management (xCMS)

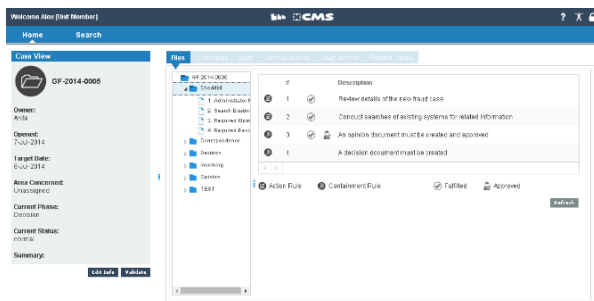

xCelerated Document Management (xDM) **UPDATED**

Streamlined document management application that demonstrates the powerful ECM capabilities delivered with xCP and showcases how you can build dynamic user interfaces that can be configured at runtime. Watch the tutorial that accompanies the xCP 2.1 version to see it in action.

xCelerated Procurement Management (xPM)

The xPM sample application demonstrates how a procurement flow can be followed through from purchase requisition, approvals, pre-qualification, responses, analysis, award and contract signing. It also shows how the contract management is handled with renewals, events, documents, execution and other elements.

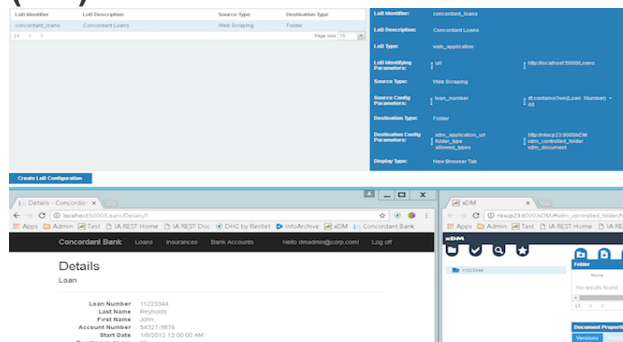

[More Info & Download for xCP 2.2](#)

Investigative case management application that demonstrates an end to end investigative process that can be run from a tablet device or desktop PC.

xCelerated Integration Services (xIS) **NEW**

The xCelerated Integration Services (xIS) sample application demonstrates how xCP can enrich LoB (Line of Business) applications with xCP functionality through configuration, without the need for coding or modifying of the original LoB application.

NOTE ON MANIFEST SYNTAX FOR xCP 2.1 APPLICATIONS

Most sample applications include libraries (JAR files). These libraries require that the xCP execution environment specification in the file MANIFEST.MF inside the library matches your environment. If you are unable to import the sample application into Designer then use a tool like 7Zip to view the contents of the libraries and edit their manifest files. The correct syntax of the environment is 2.1.x where x represents the patch level of your environment (i.e. 2.1.3 for patch 03, 2.1.2 for patch 02 etc). The only exception to this rule is that for the GA release (no patch) the value 2.1.RC2 should be used.

PLEASE NOTE THAT THIS DOES NOT APPLY TO THE xCP 2.2 or 2.3 VERSIONS OF THESE APPLICATIONS
