V7.6 Release Notes

YPLM#	Feature List
541	**Admin Folder:** New System Configuration settings: • *AutoPageApproved:* This setting applies to the Style Workflow subpages. When enabled, determines whether the main bubble is approved based on one approval, and when all bubbles are approved the main bubble will also be approved. • *DisabledMaterialColorPending:* This setting applies to the Material Folder. When enabled, colors are directly added to the material by skipping the pending option. • *DisableBOMPending*: This setting applies to the Style BOM page. When enabled, materials are directly added to a style by skipping the pending option. • *PC1-4:* This setting applies to the Style Header. When enabled, allows the user to replace the default name for the 1st set and so on, when using multiple sets.
542	**Application Configuration:** The User profile page and Admin User list are now configurable.
543	**Application Configuration:** The Style Header detail tab is now configurable.
262	**BI Folder:** The BI Folder contains a new report named "Style Summary and Status" which includes new filters like style status, and sample status etc.
572	**BI Folder:** New Sample #'s, from Style Sample Request and Material Request, are reflected in the BI reports and print previews.
545	**Application Configuration:** Clients can configure the Construction Detail areas, Control Panel, and Style workflow page by hiding, grouping or renaming fields to fit the business purpose.
534	**Control Panel:** The Measurement Template Size Range field now expands to fit longer size range descriptions.
551	**Material Folder:** The Material Request Colors tab area has been updated to include batch update capabilities.
550	**Control Panel, Material Folder, Style Care:** The Care Control Panel entries have been updated to include a rank order function. The Material Folder now includes a Care page option which allows you to fill in care detail against each material. The Style Care workflow page has been updated to include a Select BOM button, which will populate the Care page detail based on the chosen BOM.
538	**Material Folder:** Users can create material size templates and use them with materials that require defined sizes. For example, Material Type = Trims.
546	**Measurement Page:** The Style Measurement Sample printouts have been updated to include the measurement image.
536	**Measurement Page:** When creating or selecting a Measurement Template on the Style Measurement workflow page, a user will now have a filtered list of templates based on the Size Range and Size Class from the style header. The user can then change the search filter to see other options.

549	**Sample Request:** Every Sample Request and Material Request now includes a system generated sample reference number, located within the header.
547	**Style Folder:** The Style Folder's Text-Image workflow page now includes a Text-Only and Image-Only printout option.
537	**Style Folder:** The Style Folder's Text-Image workflow page now includes a Text-Only and Image-Only option.
544	**Style Folder:** The BOL Control Panel and BOL Style workflow page now includes the SAM (Standard Allowed Minutes) field to define the time at operation level.

YPLM#	*Defect List*
592	**Adobe Illustrator Plugin:** Updated an issue where users received an error upon opening the AI Plugin's Image Folder.
420	**Application Configuration:** Corrected an issue where Styles outside of the Line List were not configurable.
422	**Application Configuration:** Corrected an issue where Styles within the Line List were not configurable.
461	**Application Configuration:** Corrected a configurability issue where some new style types resulted in not allowing a user to add new fields for a Style Tech Pack.
514	**Application Configuration:** Corrected an issue where the 'StyleThemeID' EAV field was available for inclusion within the Style Header, however, not the Style Search or Line List Search areas.
586	**Application Configuration:** Updated the Sourcing Folder to contain "expression field" configurability.
585	**Application Configuration:** Corrected an error in the Sourcing Folder Quotation area while saving new configurability fields.
501	**BOM:** Corrected an issue with a blank BOM and Color preview printout after adding materials and colors yet not saving colors.
265	**BOM:** Corrected a BOM Dimensional error which resulted from using a comma in the Quantity field.
78	**Color Folder:** Corrected the Color chips AUTOID when creating new colors with the AI Plugin.
186	**Color Folder:** Corrected an issue where removing seasonal colors from a Material resulted in a screen closure.
459	**Control Panel:** Corrected an error message which appeared when attempting to save a measurement template while the app setting key 'DisplaySizeDescription' is set to True.
417	**Line List:** Corrected an issue where a user was unable to create a Style # while in the Line List.
419	**Line List:** Creating a new line list resulted in a loading error when quick fill is selected and the size range is not displayed.

384	**Material Folder:** Corrected an issue when removing colors from a Material even when linked to a Style.
355	**Sample Request:** Corrected an issue where sizes were mixed within the print preview for a Sample Request – Multi-Sample.
392	**Sample Request, srmOn:** Updated the Sample Requests to reflect an unshared Style and no longer share comments with a srmOn partner.
323	**srmOn:** Updated SrmOn to include 3D files in the Material Requests.
496	**Style Folder:** The Style – Text/Image workflow page now allows users to enter unlimited text within the Text area.
395	**Style Folder:** Updated and expanded the print preview to fit the unlimited text entered in the Style Text/Image workflow page.
36	**Style SKU Page:** Corrected an error which occurred within the Style SKU page not transferring the selected Size – Alteration selections.
484	**Style SKU Page:** Updated the Style SKU edit page to include the page number and record bar.
