## V7.5 Release Notes

YPLM#	Feature List
160	<b>Application Configurations:</b> Creating a <i>New</i> field within an EAV form, which is linked to other pages, now allows users to apply the same new fields to multiple pages. This works the same as when using the Add function.
380	<b>Application Configurations:</b> The Sourcing area now offers users the ability to configure fields for quotes and commitments while determining which fields are available through SRMOn. This also includes the ability to add basic calculations within its respective fields.
96	<b>BOM:</b> The first three columns (Material Image, Material Number and Material Name) within the BOM Edit area are frozen, allowing the user to view and modify the designated material fields even when scrolling to the right side of the page.
376	<b>Control Panel:</b> Added a new feature to sort predefined Tech Packs within the Predefined Tech Pack Control Panel. This will reflect when creating new Predefined Tech Packs within the Style folder.
378	<b>Control Panel:</b> Added the ability for the client to configure and manage dimensions from the Control Panel for use within a Bill of Material page.
377	<b>Material Folder:</b> Added material price conversion support for Purchase UOM and BOM UOM. For example: Purchased thread in Cones UOM but used on the BOM as CM UOM.
375	<b>Measurement Page:</b> Added new system setting <i>EnableAlternateCodeColumn</i> which displays the alternate measurement name as a separate column on the style measurement page.
465	<b>Sourcing:</b> The quotation palette button functionality has been removed to simplify the quote creation process. The quick quote function allows a user to add quotes in mass whereas the quotation palette only allowed one quote at a time.
388	<b>Style Calendar:</b> Users no longer need to link a Calendar for the Planned Start, Planned End, Actual Start and Actual End date columns to populate. This will now pull directly from the associated workflow page regardless if a calendar is associated or not.
379	<b>Style Folder:</b> Multipage workflow printouts for Freelance Design, Construction Detail, Bill of Labor, Care and Text-Image now display a user-designated name in the upper right-hand corner.

<b>YPLM#</b>	<b>Defect List</b>
236	<b>Application Configurations:</b> Updated the <i>SubCategory</i> Style Header attribute EAV field to function consistently throughout the Style Folder and Line List areas.
245	<b>Application General:</b> Updated the language settings area to work with the Dutch language.
374*	<b>Application General:</b> Corrected errors when adding EAV fields within the Style Header or Line List areas.
369*	<b>Application General:</b> Corrected a SQL error upon upgrade of the application.
408*	<b>Application General:</b> Corrected an error which occurred when a user does not have permission to the BI folder and a home screen was not selected.
359	<b>BOM:</b> Corrected an issue with the Style BOM View mode which displayed editable fields in Chrome, when all fields should be grayed out like in IE.
320	<b>BOM, Color Folder:</b> Corrected an error with a color name character limit which occurred when adding Material to a Style BOM.
383	<b>Construction Details:</b> Corrected an issue within the Style Folder where using the Break Link function twice for a Construction Detail returned blank user defined fields.
361	<b>Image Folder:</b> Corrected an issue where hiding a CDate or MDate EAV field resulted with an error.
235	<b>Measurement Page:</b> Corrected an issue where linked pages in the Style's Share area were not listed in the Shared column.
272	<b>Sample Request:</b> Fixed an error which occurred after pressing the Select Image button within a Sample Request and waiting several minutes for the page to load.
354	<b>Sample Request:</b> Updated an issue where a Sample Request Preview with a full page of POM's resulted in the overlapping of the page footer.
357	<b>Sourcing:</b> Fixed a line break issue when adding a Quote comment, which only occurred when using IE11. Pressing enter added a space instead of going to the next line within the Comment area. However, once saved the content is shown correctly.
263	<b>Style BOL:</b> Updated the Style BOL base rate field to display as 3 decimals within the read and edit modes.
371	<b>Style Folder:</b> Corrected an original image not found error resulting from an image copied during the Style Copy process within the Style Folder.
397	<b>Style Folder:</b> Corrected an issue where linking an Artboard via the AI plugin to a Styles nonexistent Text-Image page, then adding the page resulted in an error.
223	<b>Tech Pack:</b> Corrected an issue with an OOTB division field not showing on the Tech Pack printouts.

\*These work items also apply to software version 7.4.1.
