

OASIS

UNITING PAST AND FUTURE

OASIS

THE OASIS NETWORK

Oasis is a decentralized trading network, powered by blockchain technology, created with the purpose to finance, deploy, and develop 10,000 Hectare Paradise projects. Additionally, the network will be used to exchange, trade, and deliver the commodities that are produced by these projects, as well as distributing a portion of the profits obtained in the form of a dividend.

❖ What is the 10,000 Hectare Paradise?

The 10,000 Hectare Paradise project is an attempt to demonstrate that humanity can produce all the food necessary for its subsistence without complete disregard for how this food is produced. It is (perhaps the first) attempt at producing organic, and agro-toxic free commodities on an industrial scale.

But this is not all.

One of the fundamental objectives of this project is to bring the farmers themselves back into the spotlight, as one of the fundamental pillars of our society. The agricultural industry as a whole is now dominated by a few corporations that produce commodities on mass scale, without any consideration for the long term impact their production methods may have on our society, and the entire planet Earth.

Through 10,000 Hectare Paradise, we aim to be the first to produce commodities on a massive scale, but on a sustainable, socially and environmentally responsible manner, without losing efficiency or cost-effectiveness in the process.

At the core of this initiative is a collection of several key technologies collected, enhanced and fine-tuned over the last few decades, which when combined, provide the synergy necessary to compete with the large agricultural monopolies in terms of efficiency and yield, but unlike those big players, we use all the outputs from all processes as inputs for the processes that follow, in this way producing no waste, and reutilizing all sub-products in one form or another.

This is what we call “Waste to Value”. An example of this concept is the fact that organic crop waste is used to produce electricity for the fields, as well being a necessary component in the organic fertilizer that is used to enhance the soil.

These technologies are so powerful in fact, that we go beyond just competing with traditional agro-businesses. ***These technologies have proven to yield as much as 100% more on the same land surface than their traditional counterparts with similar costs of production,*** thus putting Oasis well ahead of its competition in this space, all the while remaining socially responsible and environmentally sound.

❖ A trading network powered by distributed ledger technology.

The Oasis trading network is a key component in the introduction and future success of this initiative. ***The Oasis token, the native currency of the network, will be used to distribute a portion of the revenues obtained in these 10,000 Hectare Paradise***

units in the form of a dividend. This dividend will be payable to ALL Oasis token holders, whenever these commodities are sold on the open market.

Additionally, each production unit will have its own token. These sub-tokens will be used for purchasing the organic commodities produced within that production unit. We refer to these sub-tokens as Eco-Tokens.

The way this works is through a 3-Tier currency system:

- 1. Oasis, the native token, will be convertible to each and every Eco-Token.***
- 2. These Eco-Tokens, in turn, will be convertible into tokenized version of each commodity produced in that unit.***
- 3. These tCommodities as they are called, are directly convertible into the commodity they represent. They are 100% backed by real organic production from the 10,000 Hectare Paradise units. There is no fractional reserve in this third tier.***

Thus, the Oasis Trading Network not only facilitates the distribution of the profits generated from the 10,000 Hectare Paradise projects, but the commodities themselves!

❖ **The Value Proposition**

The Oasis trading network derives its value from its many key advantages, which we'll now enumerate:

- 1. Agricultural Dividend:*** All production units within this network will share a part of their revenue in the form of a dividend, payable to all Oasis token holders regardless of who they are or where they may be. As such, the Oasis token itself derives its value from agricultural production.
- 2. Organic Commodity Trading:*** This network enables the trading of organic production, and thus enables the free market to set a price for these higher value items.
- 3. Higher Land Value:*** The production methods utilized in 10,000 Hectare Paradise projects are in strict alignment with the laws of nature and the environment. The land chosen to deploy these projects on can be barren land that is unusable by conventional production standards. The technologies employed by 10,000 Hectare revitalize and enhance the quality of the soil, thus unlocking land value where none existed before!
- 4. Decentralized Futures Trading:*** In the future, and once enough trust and reputation has been established within the Oasis Trading Network, we plan on launching decentralized, non-standardized futures trading by trusted participants. It's important to highlight that the method for establishing trust will be generated exclusively within the trading network. We are firm believers in DLT and its potential to generate trustless, self-reinforcing systems, driven by the communities that are a part of it.

❖ **Trustless Governance**

As a DLT project, the future of the Oasis network will be determined by its community. While it's true that the 10,000 Hectare Paradise projects will be launched and managed by the Oasis company, the future plans for this company is to become the Oasis Foundation, and step aside from leading the Oasis Network, serving in an advisory capacity only. The Oasis ledger will have the latest governance features experimented with by some of the more recent DLT projects, and we plan on introducing liquid democracy and self-governance to our communities. We believe in a future where the individual is self-empowered and sovereign. ***Distributed ledgers allow, for the first time in history, to create trustless governance systems where the community, that is to say, the people are finally able to determine their destiny. We plan on being a part of that revolution.***
