

## **How to create animations using Photopea**

The first most important thing that you will need to know is the workspace in Photopea. In order to do that, I have found a super video to help you get familiar with the workspace. Even though it's titled as a Photoshop tour, Photopea is the free version and exactly the same as Photoshop. It's a little lengthy; however, I found this guy to have the best tutorials for beginners and his voice is very soothing. So grab a hot or cold drink and begin your training by clicking on this link: [Let's take a tour of Photoshop](#).

Now that you have an understanding of the workspace, you can begin creating your own animation. This is the website to get your started: [Photopea](#)
