## Windows & Mac

One thing I will try to be more considerate of is what features are available to both Mac and Windows users. The Quicken customer is mostly Windows users, however, I do not wish for our Mac users to feel left out.

This month, I found a feature that Quicken offers for both Mac and Windows users. Investing and securities.

I go over where to access your securities and how to add a security, as well as some other tips and tricks.

If you have any other details you would like to share regarding how to best use Quicken when it comes to securities, sound off in the comments.
