

# Tax Alerts

Quicken can also send you reminders regarding your taxes like important tax dates or notify you about the impact of tax-related transactions.

These alerts can be set up as well in the Tax Planner. By default, tax alerts are enabled whenever you create a new Quicken data file or convert data from a previous version of Quicken, but you can turn them off and back on when you want.

## March and April 2023 Releases

We have released R48.15 back in March. Before you install this update, we recommend you perform a One Step Update to ensure that your data is synced to the cloud. You should also make a backup of your data file.

The biggest fixes that were addressed in this release was the issues updating the connection for online bills and the issues that were reported regarding crashes for some users. To update Quicken for Windows, please visit this [support article](#).

For Mac users, Version 7.0 was released in April. This release requires macOS 10.15 (Catalina) or higher.

Many improvements and new features were added like: OFX Bill Pay errors are now shown in the Connection Status window, and an improved display of payees with descriptions.

For more details about the release and the changes that were made, please visit this [support article](#).
