2. Dashboard used to visually represent line data of that sheet

3. Form in the dashboard creates new line (at top of list) in intermediate sheet

[illegible]

4. The first line of the intermediate sheet (step 3) activates “Dashboard” checkmark in the Overview sheet (see step 1)
5. Dashboard “should” reflect data from the line that is checked in the Overview sheet ← This is the issue, right now I can only get the dashboard to read the first line of the sheet, not the checked line
