#battery

What do we do about premature battery drains?

Augury monitors the health of your battery life and its consistency.

You can find that information on the platform under the [IoT health page](#).

As batteries deplete, replacements will be sent to your facility.

Premature drains may be caused by factors such as dramatic temperature changes, Endpoints dislodged from their machines and not near the node, or, in rare cases, a damaged endpoint. Contact your customer success manager to troubleshoot premature drains on a case-by-case basis.

Endpoints (205) | 13 with alerts

Device	Location	Status	Required actions	Battery	Last valid data
 R-2012-052-003 (תא גופרית עליון... Bearing 9 - Driven equipment DE 20029295	10/11 > 11/12 מנהרה	 Offline - Node issue +1	- Check mounting Mark as done		
 R-2012-052-003 (תא גופרית עליון... Bearing 1 - Motor NDE 20031811	10/11 > 11/12 מנהרה	 Offline - Node issue +1	- Check mounting Mark as done		
 fan dryer 1 Bearing 4 - Driven fan NDE 42032329	42 > absorption	 Out of position	- Check mounting Mark as done		
 R-2010-041-506 Bearing 1 - Motor NDE 10038188	41 > Ground	 Not sending data	- Inspect endpoint		2 days ago
 R-2010-041-506 Bearing 1 - Motor NDE	41 > Ground	 Not sending data	- Inspect endpoint		

Drained battery 2 months

Battery level is critically low – a new battery is needed.

 2 months

What is the average life expectancy of batteries?

The average life expectancy of the current Endpoint 2 (E2) battery life is three years (depending on the sample cycle and environment).
